## Upgrade to Digital CCTV

It's easy to upgrade from an existing analogue CCTV system and very cost effective. This selection of Digital Video Recorders simply connect to your video camera outputs. The machines are pre programmed to detect and record high quality video automatically from switch on. You will never have to change a tape again as the system records for days or weeks directly to the built in hard drive and will overwrite the oldest video file automatically. Existing monitors may also be used, although you may choose to upgrade to a new flat screen CCTV monitor for clearer sharper images. For more details and storage calculation please call our support team.
